## P-000252-01

### Information

<b>Project Number</b>	P-000252-01	<b>Publication To Supersede</b>	HB 167:2006
<b>Proposal</b>	1 x Revision	<b>International Publication To Adopt</b>	
<b>Proposed Project Number</b>	P-000252-01	<b>PMG Approval Date</b>	
<b>Proposal Number</b>	P-000252	<b>Publication Date</b>	
<b>Designation</b>	HB 167:2006	<b>Development Phase</b>	01. Project Approval
<b>Title</b>	Security risk management	<b>Product Type</b>	Handbook
<b>National Committee</b>	MB-025 Security and Resilience	<b>Interim Standard</b>	<input type="checkbox"/>
<b>Sector</b>	Public Safety, Public Administration, Business and Management	<b>NCC Project</b>	No
<b>Project Type</b>	Revision	<b>Other Legislative Reference</b>	No
<b>Project Status</b>	Proposal	<b>NCC or Legislation Description</b>	The HB167 is not under legislation but is referenced in Commonwealth and State policy documents such as the Protective Security Policy Framework and the Defence Security Principles Framework.
<b>Project Complexity</b>	Medium	<b>Roles &amp; Responsibilities</b>	No
<b>Engagement Manager Evaluation</b>		<b>Comment</b>	
		<b>Copyright Requirements</b>	Yes
		<b>Comment</b>	They will be aligning the handbook with ISO 31000 which has already been adopted.

### New Publication

What is the problem?

What is the scope of new Publication?

### Revision/Amendment

**Why does publication need changes?**

This is a revision of HB 167 Security Risk Management which is widely used across government, training institutions and private industry for security risk management, education and planning.

**What evidence exist?**

Due to its wide usage in industry, training, and government, it needs to stay current and aligned with the standard it refers to (AS ISO 31000).

The current HB is aligned to the old AS/NZS 4360 and needs to be updated to AS ISO31000.

**What is your Proposed Solution?**

The primary issue is to have alignment with the AS ISO31000. It also requires some updating to reflect current security and intelligence practices. There is no scope change to the original document. This Handbook is not a Standard, rather it provides guidance material based on the tried and proven risk management methodology of AS/NZS 4360:2004. The AS ISO 31000:2018 had been adopted as the Australian Risk Standard and the handbook now needs to be aligned to the current model Risk Model and that of AS 5050 Managing Disruption Related Risks.

The aim of this updated Handbook is to provide a guide for the application of AS ISO 31000 to the security domain to meet current industry and government requirements and generate an improved understanding of how security risk management can be used for a range of activities from developing a system for a 'greenfield site' to enhancing existing well-established security programs.

**Identical Adoption**

**Why should publication be adopted?**

**Modified Adoption**

**Why should publication be adopted?**

**What are your Proposed Variations?**

**Reasons for non-identical adoption?**

**Internal SA Team**
